

Edmonton is Going Solar

The City of Edmonton's Inspiring Projects, New Incentive and Financing Programs

Edmonton has embarked on many exciting new renewable energy initiatives. With new requirements that all city projects must spend a minimum of 1% of their budget on renewables, and plans to supply all of the City's building with renewable electricity, Edmonton is leading by example. Come hear about Edmonton's own solar grant program. Also, new solar system financing options are emerging. When will the game-changing

Property Assessed Clean Energy (PACE) bonds be available?

To top all of that Edmonton has a growing list of large solar heated and solar electrified buildings.

Free Event

Thursday,
January 10
7:00PM
